**Appendix S3** Primers used for sequencing ArgK (AK), 28S rDNA (28S), LW Rh (LR) and CAD (CD). Coordinates for 28S are based on *Drosophila melanogaster*, GenBank sequence M21017. All others are based on *Apis mellifera*, from GenBank sequences XM\_393888 (CD), U26026 (LR) and AF023619 (AK). Coordinates in AK begin at the start of the coding sequence. Sources: A = Belshaw & Quicke, 1997; B = P. S. Ward, UC Davis, pers. comm.; C = Ward *et al.*, in press, D = this study, E = Ward & Downie, 2005.
